

# SPECIALTY POLYMER COATINGS, INC

The Undisputed Leader In Pipeline Corrosion Coatings

**S**pecialty Polymer Coatings, Inc. (SPC) is the leading North American formulator, manufacturer and distributor of 100% solids (no VOC's) liquid epoxy and polyurethane coatings. The Company's lines of coating systems are used extensively throughout the pipeline industry.

Zebron polyurethanes were SPC's first 100% solids liquid coatings systems, which became the first 100% solids liquid coatings to be used in the Pipeline Industry for external corrosion protection of buried pipelines and facilities.

Building on its pioneer work with polyurethanes, Specialty Polymer Coatings, Inc. became a leader in the formulation of liquid epoxies for the Oil and Gas Industry. This was predicated by the Industry's need for protective coatings that were capable of withstanding higher pipeline operating temperatures. Possessing outstanding corrosion protection properties and excellent application parameters at in-service temperatures up to 248°F (120°C), SPC systems are now considered the "standard" for liquid pipeline coatings.

With a primary focus on the coating needs of the Pipeline Industry, SPC has become one of the largest suppliers of 100% solids liquid coatings in this market. On new pipeline construction projects, SPC products are used for the coating of pipe, valves, fittings and girth welds. Coatings are also available for abrasion resistant applications on pipe used for directional drilling/slip bores.

SPC formulations are the premier systems utilized for pipeline rehabilitation (recoating) programs, be it brush/roller, plural-component spray application, or automated line travel spray application.

Specialty Polymer Coatings, Inc.'s corporate objective is to produce the "coating of choice" and provide superior client services from the time of project inception to completion. To meet this objective, SPC is committed to responding and meeting the needs of the Industry with the development of new and improved coatings

through its extensive research and development programs at the Company Laboratory.

SPC has a team of field technicians deemed the most knowledgeable in the 100% solids liquid coating industry. Services provided are project start-up including a safety orientation, troubleshooting and problem resolution, project management, and certification programs for brush and plural component spray application.

International agreements have been established which enable SPC to offer its services and materials worldwide.

Specialty Polymer Coatings, Inc. enjoys being a member of the Pipeline Industry and looks forward to providing solutions to its protective coating requirements long into the future.
